

4. IMPLIKASI FAKTOR RISIKO

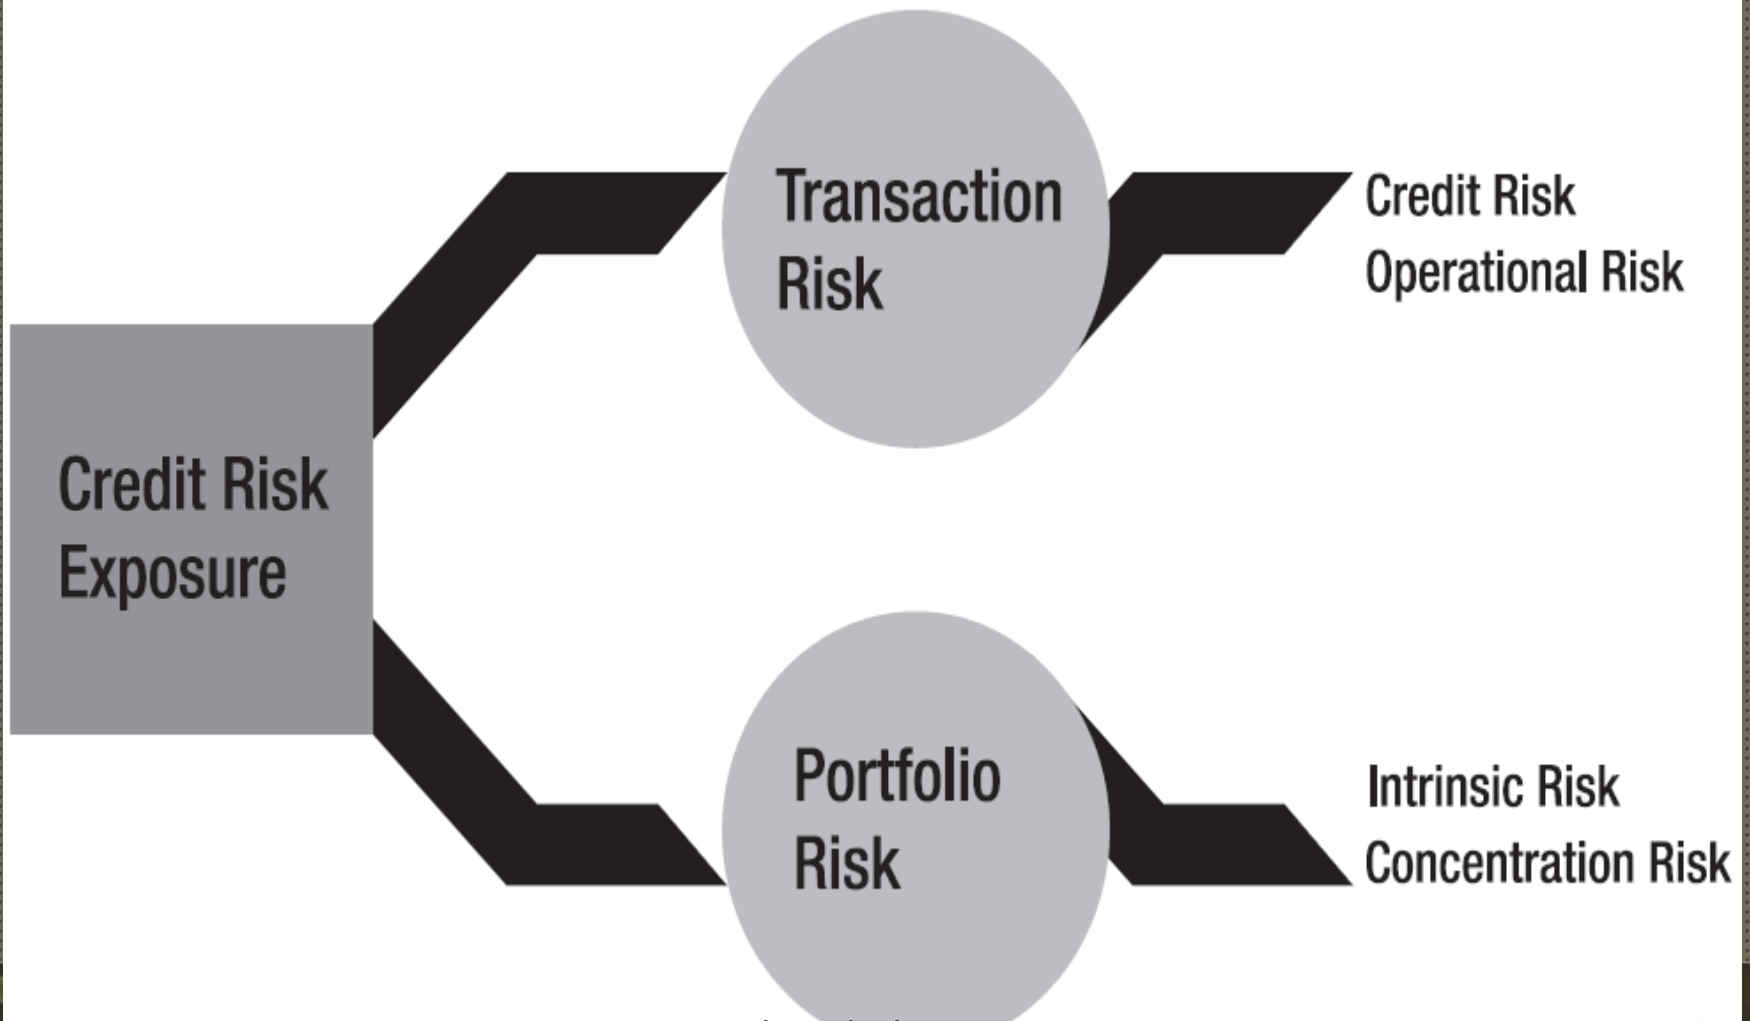

Prepared by Dr. Ahmad Subagyo

4. Implikasi Faktor Risiko.

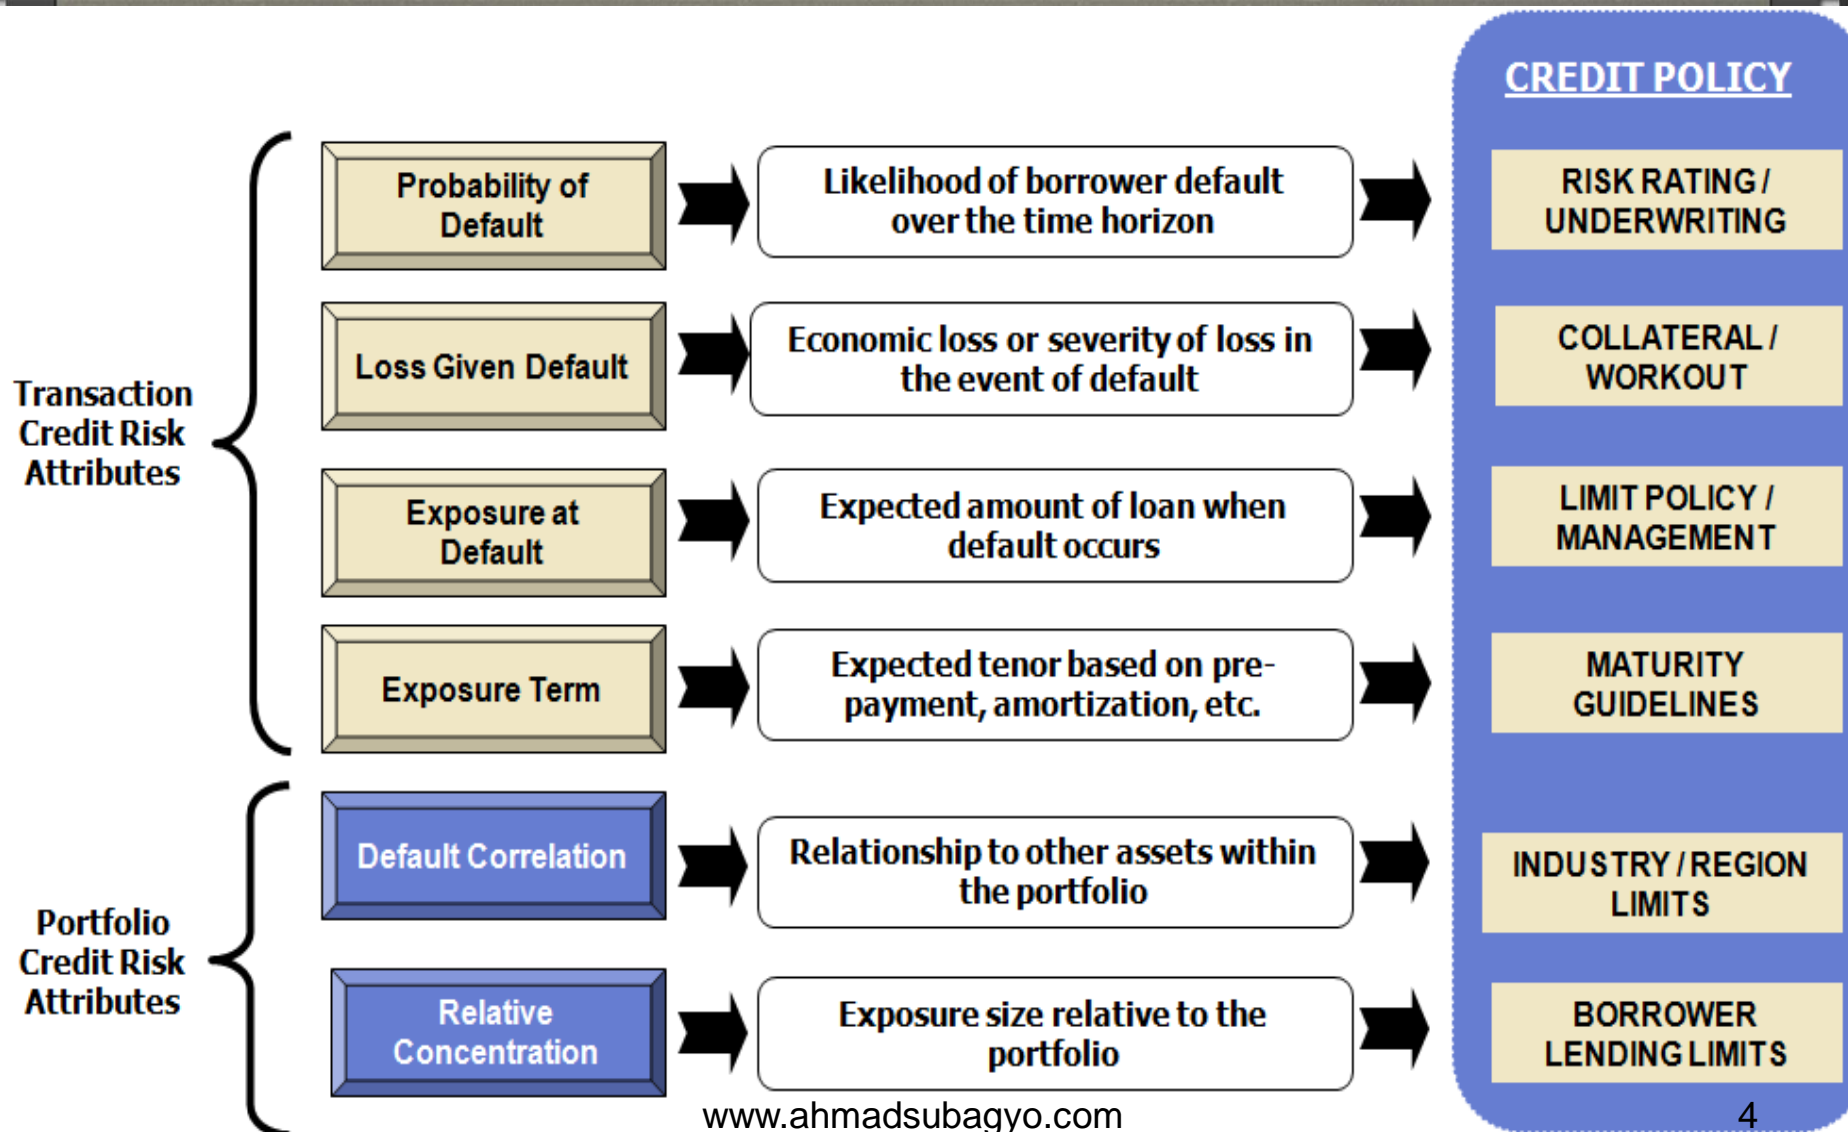

JENIS FAKTOR-FAKTOR RISIKO KREDIT

ABC	BCD	CD	DEF	FG	GE	HIJ
123.56 + .22	23.33 - .04	432.56 - .12	567.89 + 4.22	122.21 + 5.12	99.32 - 1.32	65.17 + 21.34

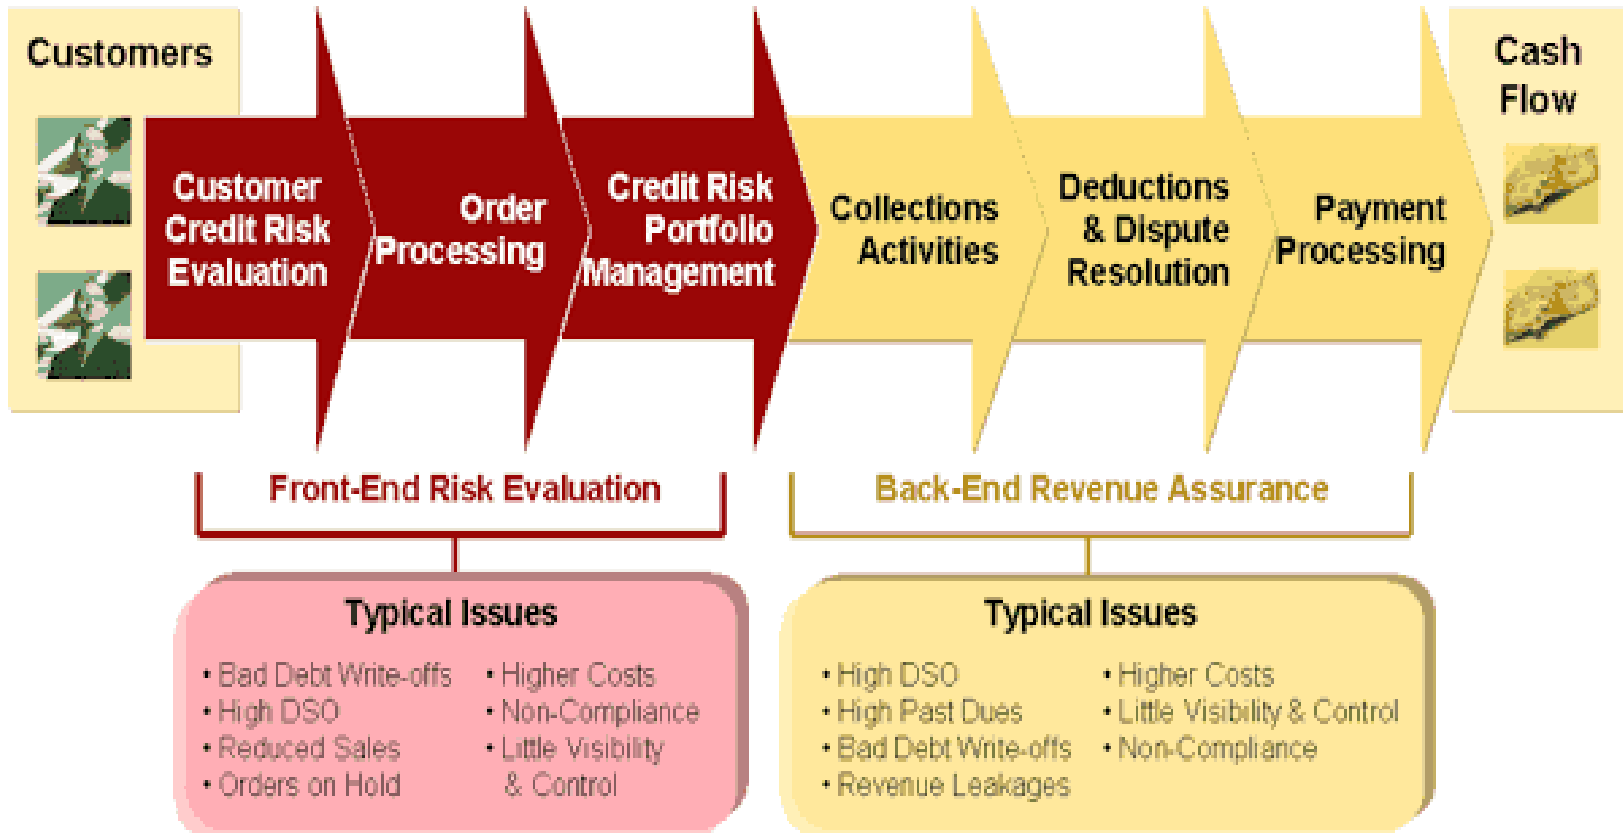

Primary Credit Risk Components

Credit Risk – Linkages to Credit Process

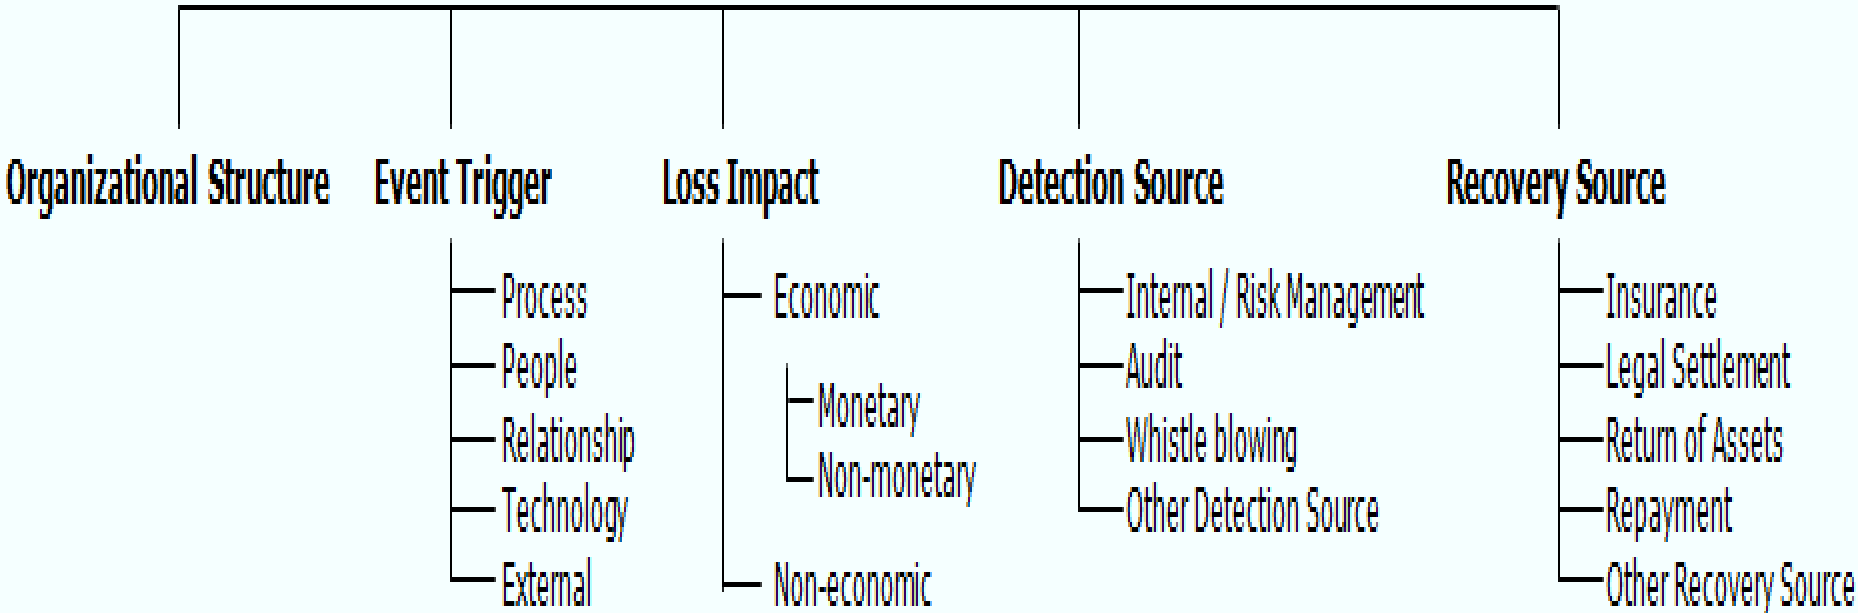

Credit Evaluation & Assurance

ABC	BCD	CD	DEF	EFG	FG	GE	HIJ
123.56	23.33	432.56	567.89	123.45	122.21	99.32	65.17
+ .22	- .04	- .12	+ 4.22	- 24.3	+ 5.12	- 1.32	+ 21.34

RISK MAP

ABC	BCD	CD	DEF	FG	GE	HIJ	
123.56 + .22	23.33 - .04	432.56 - .12	567.89 + 4.22	123.45 - 2.3	122.21 + 5.12	99.32 - 1.32	65.17 + 21.34

4. Implikasi Faktor Risiko

BAGAIMANA MEMBANGUN STRESS TESTING MODEL DAN MENYIKAPI HASIL STRESS TESTING TERSEBUT

ABC	BCD	CD	DEF	ERG	FG	GE	HIJ
123.56 + .22	23.33 - .04	432.56 - .12	567.89 + 4.22	101.11 - 21.3	122.21 + 5.12	99.32 - 1.32	65.67 + 21.34

What is stress testing?

- “Stress testing is a risk management technique used to evaluate the potential effects on an institution’s financial condition of a specific event and/or movement in a set of financial variables. The traditional focus of stress testing relates to exceptional but plausible events” (Bank for International Settlements, Committee of the global financial system, January 2005: Stress testing by large financial institutions: survey results and practice)

ABC	BOD	CD	DEF	ERG	FG	GE	HIJ
123.56 +.22	23.33 -.04	432.56 -.12	567.89 + 4.22	101.11 - 2.3	122.21 + 5.12	99.32 - 1.32	65.17 + 21.34

Key aspects of Stress Testing

- The environment in which banks have to operate
- The definition of unexpected loss
- How to use the outcome of the stress test

ABC	BCD	CD	DEF	FG	GE	HIJ
123.56 + .22	23.33 - .04	432.56 - .12	567.89 + 4.22	122.21 + 5.12	99.32 - 1.32	65.17 + 21.34

The Environment of Stress Testing

- Essentially there can be two sources of stress:
 1. **Purely idiosyncratic events** such as the default of a large obligor and
 2. **Developments affecting the entire market**, such as an economic downturn.

ABC	BCD	CD	DEF	FG	GE	HIJ
123.56 + .22	23.33 - .04	432.56 - .12	567.89 + 4.22	122.21 + 5.12	99.32 - 1.32	65.17 + 21.34

Types of Stress Tests

- **Constant stress test** :this involves the (simultaneous) movement of risk component(s), without taking into account the properties of the subportfolios or the interrelations with external events (that is, a flat stress is applied for PDs).
- **Model-based stress test** : this approach could be divided into univariate (relying on one random variable) and multivariate (involving a number of independent mathematical or statistical variables) approaches.

ABC	BCD	CD	DEF	FG	FG	GE	HIJ
123.56	23.33	432.56	567.89	122.21	99.32	65.67	11
+22	-04	-12	+4.22	+5.12	-1.32	+21.34	

Stress Testing Scenarios

- **Historical scenarios** : extreme universes of risk factors observed in the past that are related, largely, to historical events and crises.
- **Statistically based scenarios** : based on the joint statistical distribution of risk factors. The key challenge in this approach is to have enough historical data to define the distribution.
- **Hypothetical scenarios**: focuses on rare events that might have an important impact on the portfolio but have not been observed yet

ABC	BCD	CD	DEF	ERG	FG	GE	HIJ
123.56 +0.22	23.33 -0.04	432.56 -0.12	567.89 +4.22	123.45 -2.3	122.21 +5.12	99.32 -1.32	612.7 +21.34

Stress Testing Approaches

- **Portfolio or bottom-up** : the identification of risk drivers is strictly dependent on the portfolio composition
- **Event or top-down** : a study of the impact of a chosen scenario

ABC	BCD	CD	DEF	FG	GE	HIJ
123.56 +.22	23.33 -.04	432.56 -.12	567.89 + 4.22	122.21 + 5.12	99.32 - 1.32	65.17 + 21.34

Basel II and IFRS

All Loans and Receivables according to IAS 39

LLP – categories under IFRS methodology

Individually significant loans

Not individually significant loans

Specific Loan Loss Provision

= Carrying Amount/PV of CF

Impaired

General Loan Loss Provision

= Usage * PD * LGD * LIP

Non-impaired

Portfolio Loan Loss Provision

= Usage * 1 * LGD

Non-impaired

= Usage * PD * LGD * LIP

Impaired

Individual LLP

Collective LLP incl. transfer risk

Collective LLP

LIP = "Loss Identification Period"

Above mentioned formulas are only applicable for on-balance sheet items (LaR)

Application of Basel II Parameter for IFRS Provisioning

Expected Loss

$$EL = EAD * PD * LGD$$

Incurred Loss

$$IL = CA * PD * LGD * LIP$$

For meeting the requirements of the IAS Incurred Loss Concept, adjustments to the Basel II advanced IRBA approach are necessary

a)
Assignment of portfolio

b)
EAD/Carrying Amount (Exposure at Default/expected amount of the debt at term of default)

c)
PD (Probability of Default)

d)
LGD (Loss Given Default)

e)
LIP (Loss Identification /Emergence Period)

EL = Expected Loss, EAD = Exposure at Default, PD = Probability of Default, LGD = Loss Given Default, IL = Incurred Loss, CA = Carrying Amount, LIP = Loss Identification Period

Loss Models - The LIP concept

Incurred Loss Model

Default loss events identified (impaired):

- Significant: Individual impairment measurement
- Not significant: Portfolio measurement

$$IL = IA * 1 * LGD \text{ (no consideration of LIP as it is in default)}$$

Loss Event

Loss Identification

Loss Identification Period (LIP)

No identification of loss events (non impaired):

- Portfolio measurement

$$IL = IA * PD * LGD * LIP$$

Expected Loss Model

31.12.2006

31.12.2007

1-year-PD

Loss Event

Expected Loss =

$$EAD * PD * LGD$$

Menghitung PD
